

Elbi of America is excited to announce the acquisition of Chester Paul Company, a water treatment component sales and system design company. Chester Paul Company was founded in 1948 and for over 20 years has been focused on quality component sales in the reverse osmosis and filtration market space.

Elbi of America was founded in 1990 as an ASME water tank manufacturer. Today our brands include: Arrow Industries, servicing the appliance installation industry, BackStop, providing water storage and thermal expansion tanks, and DuraTrac, servicing the gas connector market. Chester Paul Company will now represent Elbi's dedicated water filtration division.

The synergies and integration of talent, product offerings and North American distribution centers in California, Texas and Pennsylvania will offer customers and vendors a more robust inventory supply chain and a superior customer experience.

With growing water treatment awareness and our manufacturing partners' commitment to solve emerging contaminants we are committed to bring our customers the latest technology in the water purification market.

Elbi of America welcomes the Chester Paul Team, their customers, and vendors to the Elbi family.
